Figure 2. Semantic pseudo-label generation. A frozen DINOv2 ViT-B/14 backbone extracts patch tokens (768-dim), compressed to 90-dim by a frozen CAUSE Segment TR EMA head. A stride-161 sliding window with L2 normalisation feeds K-Means (k=80) clustering. Cluster IDs (0–79) are mapped to 19 Cityscapes semantic classes by majority vote on train patches.
